Introduction

Purpose

This update bulletin provides a brief description of the new customer-facing features and changes to existing features introduced in Roundtable TSMS 11.8. Other internal changes or bug fixes that have been made to improve organization and/or performance may not be described in this document.

Audience

This document is intended for current Roundtable TSMS users upgrading from 11.7 to 11.8 or Roundtable TSMS users who want to learn more about the new and changed features available in Roundtable TSMS 11.8.

Platform Availability and Compatibility

- The Roundtable TSMS 11.8 standard GUI client is available for OpenEdge 10.2B and higher on supported Windows platforms.

- The Roundtable TSMS 11.8 plug-in for OpenEdge is available for OpenEdge Architect 10.2B and Progress Developer Studio for OpenEdge 11.0 and higher on supported Windows platforms.

- The Roundtable TSMS 11.8 server is available for all OpenEdge 10.2B and higher on supported server platforms.

IMPORTANT: Roundtable TSMS software earlier than 11.7 is not compatible with Roundtable TSMS 11.8 repository databases. It is recommended that you maintain a separate repository if you must continue development that requires the use of older Roundtable TSMS releases.

For complete compatibility details of all Roundtable TSMS and Progress OpenEdge releases, please see the Roundtable TSMS Compatibility Matrix available at www.roundtable-tsms.com.

New and Enhanced Features

Roundtable TSMS 11.8 rolls-up all 11.7 service packs and includes the new features, enhancements, and bug fixes outlined below.

General Enhancements

- Add ability to specify an xref-level override on an Object basis.
- Add ability to specifying separate client and server database connection parameters for PDBASE Objects.
- Allow for the suppression of Orphan Warnings during Object check-out.
- Allow for restricting Product Module selection for Variants to only Product Modules with identical Workspace Modules.
- Add ability to more easily identify work-in-process Task dependencies.
- Add ability to more easily identify the selected Workspace Import settings.
- Ease Workspace locking for Workspace Import processing.

GUI Client Enhancements

Usability

- Add 'Default Task Directory' user-preference.
- Add the user-id to Tabletop Versions and Version Ancestry views.
- Add context-menu option and dialog to set PCODE Object xref-level.
- Add server connection parameters dialog to PDBASE Object properties.
- Add security group permission to control Orphan warnings.
- Add security group permission to control Product Module selection for Variants.

Reports

- Add 'Task Dependencies' report.
- Add equivalence option to Database Integrity Check report.
- Improve line-breaking when displaying version details on reports.

Integration

- Publish handle of Tabletop Object context menu.

Plug-in Client Enhancements

Usability

- Add user-preference to enable the Task view to group items by Product and Product Module.
- Add 'Find Dependencies' context-menu option to Tasks view.
- Add server connection parameter fields to PDBASE Object properties.
- Add xref-level to PCODE Object properties.
- Add security group permission to control Orphan warnings.
- Add security group permission to control Product Module selection for Variants.

Server Enhancements

Usability

- Remove deadlock when both Import table and Schema Update list exists.
- Improve handling of code-page and collation changes during Schema Update.
- Improve performance of xref processing.
- Write selected Import settings to log output.

Bug Fixes

- Correct ‘subscript out-of-range’ error in Module Load when determining valid Subtypes.
- Correct Object selection issue for Selective Compile where some Objects were not selected for compilation if other Objects in the given Task had already been checked in.
- Correct encryption of .resx files during deployments.
- Correct misidentified table name in installation logs.
