Introduction

Purpose

This update bulletin provides a brief description of the new customer-facing features and changes to existing features introduced in Roundtable TSMS 12.4. Other internal changes or bug fixes that have been made to improve organization and/or performance may not be described in this document.

Audience

This document is intended for current Roundtable TSMS users upgrading from 12.3 to 12.4 or Roundtable TSMS users who want to learn more about the new and changed features available in Roundtable TSMS 12.4.

Platform Availability and Compatibility

- The Roundtable TSMS 12.4 standard GUI client is available for OpenEdge 11.7 and higher on supported Windows platforms.
- The Roundtable TSMS 12.4 plug-in for OpenEdge is available for Progress Developer Studio for OpenEdge 11.7 and higher on supported Windows platforms.
- The Roundtable TSMS 12.4 server is available for all OpenEdge 11.7 and higher on supported server platforms.

Important

Roundtable TSMS software earlier than 12.4 is not compatible with Roundtable TSMS 12.4 repository databases. It is recommended that you maintain a separate repository if you must continue development that requires the use of older Roundtable TSMS releases.

For complete compatibility details of all Roundtable TSMS and Progress OpenEdge releases, please see the Roundtable TSMS Compatibility Matrix available at www.roundtable-software.com.

New and Enhanced Features

Roundtable TSMS 12.4 rolls-up all 12.3 service packs and includes the new features, enhancements, and bug fixes outlined below.

General Enhancements

The following new features were added for both the GUI and plug-in clients:

- Add ability to limit task imports to immediate workspace sources only.
- Add ability to set the number of days user passwords are valid.
- Add ability to disable users from saving login credentials locally.
- Capture audit data for Workspace and System changes.

GUI Client Changes

The following changes were made to support the general enhancements or are unique enhancements and bug fixes for the GUI client:

Usability

- Add 'Version Note' menu option to **Task Maintenance** versions browse.
- Add 'Limit Task Import' toggle to **Workspace Maintenance** window.
- Add 'Allow Local Credentials' toggle to **System Preferences** dialog.
- Add 'Prompt for Credentials for Tabletop Login' toggle to **User Preferences** dialog.
- Add 'Ignore Password Expiration' toggle to **User Maintenance** window.
- Add 'Last Login' column to **User Maintenance** window.
- Add 'Ignore Expiration' and 'Last Login' columns to **User Report**.
- Add 'Category' combo-box to **Events Viewer** window.
- Add default object name to **Rename Object** dialog.
- Add prompt for new user password when current password is no longer valid.

Bug Fixes

- Ensure that CTRL-S (Save) shortcut is consistent across windows.
- Ensure that stored credentials are compatible with password strength test.
- Correct tree view label inconsistencies on **Tabletop** window.

Plug-in Client Changes

The following changes were made to support the general enhancements or are unique enhancements and bug fixes for the plug-in client:

Usability

- Add **Open Resource** dialog.
- Add 'Index Configuration Content' user preference.
- Add 'Allow Local Credentials' system preference.
- Add 'Expiration Days' system preference.

- Add 'Ignore Password Expiration' user property.
- Add 'Last Login' user property.
- Add 'Limit Task Import' workspace property.
- Add prompt for new user password when current password is no longer valid.

Bug Fixes

- Ensure that a null pointer exception is not thrown when opening binary objects in external editor.
- Ensure that global and project user preferences behave as expected.
- Ensure that the tasks view properly handles the 'Group by Product Module' preference.

Server Changes

The following changes were made to support the general enhancements or are unique enhancements and bug fixes for the server:

Usability

- Create audit data for Workspace and System changes.
- Improve performance of Dataserver schema check when assigning domain PFIELD objects.

Bug Fixes

- Ensure that Load Schema properly handles index changes that contain both dropped fields and new fields.
- Ensure that physical name records are updated when changing object casing using the Administrator Toolkit.
