Roundtable® TSMS

Software Configuration Management for OpenEdge® Development

Manage your OpenEdge application with a full-featured SCM solution built upon and designed expressly for the platform you trust.

EXPERIENCE COMPLETE VISIBILITY AND CONTROL

Roundtable TSMS provides a project view for your application at every stage of the application life cycle. Navigate application resources, database schema, graphics, data files, and documentation – virtually anything that makes up your application. View object version history, call trees, where-used information, and objects in tasks. See descriptions, current states, attributes, version notes, and change information for each object.

STREAMLINE PROCESSES; IMPROVE PRODUCT QUALITY

Roundtable TSMS automates the promotion of changes throughout the development life cycle. Using the integrated impact analysis tools, users can instantly see what has changed, who changed it, why, and what has been impacted. Automated movement of baselines ensures that what gets changed gets tested and what gets tested is what the end users receive. Release reports detail all that has been touched within a given time by whom and why.

AUTOMATE APPLICATION DEVELOPMENT

Roundtable TSMS manages the application release level for each end user site, enabling the creation of optimized deployment packages. The deployment packages contain everything needed to deploy software changes, update schema, and compile your application updates at end user sites.

ENJOY SEAMLESS INTEGRATION WITH THE OPENEDGE PLATFORM

There is no need to adopt and manage other technologies to achieve your business goals. Roundtable TSMS is integrated into the Progress OpenEdge platform — delivering proven performance, security, and scalability for your software applications with technology you trust.

Benefits

Empowering both developers and project managers, Roundtable TSMS accelerates productivity and decreases time to market while improving software quality.

- Improves management overview
- Maintains management control throughout the entire software development lifecycle
- Enforces auditing procedures
- Safeguards systems assets

- Accelerates productivity
- Improves team collaboration
- Decreases time-to-market
- Improves product quality
- Integrates with OpenEdge

Features

☑ **Automatic Backup** — Automatically save WIP code changes to the repository.

☑ **Blame** — Identify line by line changes to an Object by user and version.

☑ **Deployments** — Build full and incremental updates of your application.

☑ **History** — Audit changes to Workspace configurations.

☑ **Hooks / API** — Integrate with and extend baseline functionality.

☑ **Impact Analysis** — View relationships between application resources.

☑ **Lab** — Enable private parallel development.

☑ **Release Management** — Identify and promote development milestones.

☑ **Reports** — Generate and customize reports.

☑ **Schema Management** — Visualize, manage, promote, and deploy application schema changes.

☑ **Security** — Create and assign user privileges per Workspace.

☑ **Shelf** — Store and share resources with other users.

☑ **Smart Compilation** — Automatically compile programs impacted by a change.

☑ **Task Management** — Organize related changes for promotion and auditing.

☑ **Variants** — Manage and identify customizations to baseline application resources.

☑ **Workspace Search** — Find given text within Workspace contents.

SYSTEM REQUIREMENTS

Roundtable TSMS requires both OpenEdge database and OpenEdge development licenses. Roundtable TSMS is supported on all OpenEdge development platforms.

COMPATIBILITY

Roundtable TSMS is an OpenEdge ABL application and uses an OpenEdge database as its repository database. As an OpenEdge application, Roundtable TSMS is OS-compatible to the extent that the underlying OpenEdge development environment is OS-compatible.

REPUTATION

As a Progress Technology Alliance Partner and recognized leader in its industry for over 25 years, Roundtable Software is committed to ensuring that its customers can leverage the best of what the Progress OpenEdge platform has to offer.

There is no need to adopt and manage other technologies to achieve your software configuration management solution goals. Our solution is integrated into the Progress OpenEdge platform — delivering proven performance, security, and scalability for your software applications with technology you trust.
